Testing will be repeated at 122F on identically prepared samples to ensure average indirect tensile strength at high temperature equals or exceeds 17 with a target of 20 psi to prevent rutting. Mix proportions necessary to satisfy performance results will be established via test strip. Mix performance testing will be run within the first 100 tons of shipped mix each day, and testing will be repeated if mix is still being shipped after 5 hours and the total shipped tonnage for the day exceeds 500. Failing results will necessitate resting. A second set of failing results will necessitate a new strip to reestablish mix proportions.
